DENTALMEDTV

Our commitment is to promote and provide continuing education for dentists and students all over the world.

Dentalmedtv is an educational provider based in Turin (Italy) with different learning options:

- ***Residential courses in its center in Turin with video presentation, live surgery and hands on;***
- ***Courses and training in other centers (in Italy or other countries);***
- ***Long distance interactive webinar, with lectures and live surgeries, performed from Turin***
- ***and discussed with attendees connected in their locations;***
- ***Long distance learning by means of videos, courses and seminars available on www.dentalmedtv.it/eng/courses/***

TURIN, 2026

Roberto Abundo MD,DDS ***July 13-14-15, 2026***

ART AND SCIENCE OF PERIODONTAL AND PERI-IMPLANT PLASTIC SURGERY FOR OPTIMAL SOFT TISSUE ESTHETICS

Stefano Lombardo DDS ***July 16-17-18, 2026***

FUNCTION AND AESTHETICS IN PROSTHETIC REHABILITATIONS ON THEET AND IMPLANTS

ART AND SCIENCE OF PERIODONTAL AND PERI-IMPLANT PLASTIC SURGERY FOR OPTIMAL SOFT TISSUE ESTHETICS

Three-day full immersion course with Dr. Roberto Abundo

Esthetics is the main focus of contemporary dentistry.Therefore achieving optimal soft tissue contour both around natural dentition and around implants is the goal of any comprehensive esthetic treatment. In the present course the attendees starting from the knowledge of periodontal and periimplant soft tissue biology, will learn how to perform up to date surgical techniques for achieving excellence in clinical soft tissue management.Tips and tricks will be highlighted, surgical interventions will be directly performed by the participants on simulation models.

DAY 1: • Etiology and prevention of gingival recessions • Classification and clinical prognosis • Fundamentals of Periodontal Plastic Surgery • The Coronally Advanced Flap (CAF) for single and multiple recessions • LIVE/VIDEO Surgery

DAY 2: • The Connective Tissue Graft (CTG): conventional techniques and envelope / tunnel techniques • Harvesting techniques from palate and tuberosity • 2–Stage techniques : Free Gingival Graft (FGG) followed by CAF • LIVE/VIDEO Surgery • HANDS ON: different CAF, CTG , FGG and harvesting techniques

DAY 3: • From periodontal to periimplant tissues: biology and clinical implications • Factors affecting soft tissue contours around implants • Prevention of soft tissue complications around implants: surgical techniques • Treatment of soft tissue defects around restored implants: surgical techniques for recessions, volume defects and lack of keratinized tissue • LIVE/VIDEO Surgery • HANDS ON: different surgical techniques to improve soft tissue thickness/keratinized tissue and to cover recessions around implants

Roberto Abundo
MD,DDS

Location: Dentalmedtv
C.so Sicilia 51 Turin - Italy

July 13-14-15, 2026

Price: € 4500.00

M.D., D.D.S.
He received a degree in Medicine and Surgery and a postgraduate in Odontostomatology at the University of Turin. He was Adjunct Professor in Periodontology in the postgraduate course of Oral Surgery at the University of Turin for 11 years and at the Department of Periodontics of the University of Pennsylvania in Philadelphia for 10, currently he is Lecturer at the master course in Periodontology of the University of Turin.He is Active Member of S.I.d.P. (Italian Society of Periodontology), I.A.O. (Italian Academy of Osseointegration) and I.A.E.D. (Italian Academy of Esthetic Dentistry).
Winner of the H. M. Goldman prize for clinical research in Periodontology from S.I.d.P. in 2000 and of the E.A.O. (European Academy for Osseointegration) prize for clinical research in Implantology in 2010, he authored various publications on international peer reviewed journals, 2 textbooks and 5 chapters in other textbooks on periodontal and implant topics.He is Scientific Director of the web tv Dentalmedtv, continuing education provider for Italy and USA. Private practice at Sicor Institute in Turin (Italy), with practice limited to periodontology and implantology.

FUNCTION AND AESTHETICS IN PROSTHETIC REHABILITATIONS ON THEET AND IMPLANTS

Three-day intensive course in Fixed Prosthodontics with Dr. Stefano Lombardo

The success factors in prosthetic rehabilitation are numerous. The course will explore the selection of the ideal preparation, provisional management and final impression using the established analog protocols and the most modern digital or the hybrid approaches. Modern prosthetic rehabilitation design leverages the overlapping of multiple three-dimensional patient data to design a new smile for both teeth and implants. This results in minimally invasive dental preparations and prosthetically guided implants that respect hard and soft tissue. Intra- and extraoral scanners, virtual wax-ups, high-resolution CBCT, and innovative guided surgery software ensure increasingly personalized approaches to each individual treatment plan. A series of step-by-step clinical cases will be illustrated over the three days, covering both clinical and laboratory aspects.

DAY 1: • Case study: preview and design of the prosthetic case • Dental preparations: comparison and indications for horizontal and vertical preparations • Temporary restorations: design, relining and finishing of provisionals • How to achieve esthetics on vertical preparations (BOPT approach) • Live demonstration: tooth preparation and provisional relining

DAY 2: • Traditional and digital impression techniques: indications and limitations of Intra Oral Scanners • Soft tissue management around teeth and implants • Intermaxillary relationship recording: from habitual occlusion to Deprogrammed Passively Retruded Position • Static and dynamic facebows and digital mandibular trackers • Choosing restorative materials: from metal-ceramic to metal-free • Live demonstration: final impression in fixed prosthodontics • Hands-on: provisionals relining and finishing

DAY 3: • Implant-Prosthetics Rehabilitations • Prosthetically guided implantology • Emergence profiles and implant connections • Analog, hybrid or full digital strategies • Prosthetic rehabilitation between analogical foundations and digital innovations: step-by-step clinical cases • Live demonstration: digital and analog face bow, inter maxillary record • Hands-on: deprogramming jig and Intra Oral Scan

Stefano Lombardo
DDS

Location: Dental Training
C.so Massimo D'Azeglio 112 bis Turin - Italy

July 16-17-18, 2026

Price: € 4500.00

DDS,
diplomate as dental technician in 1992,received his dental degree with honors in 1997, at the University of Turin, ITALY. He was Adjunct Professor at the University of Turin and Genoa for 15 years in the disciplines of Restorative Dentistry and Fixed Prosthodontics. He is currently one of the Professors of the Institute for Advanced Dental Studies (IADS) www.instituteofdentistry.com, founded by Dr. Myron Nevins and Dr. Gerald Kramer. Author of publications in Italian and International journals and lecturer in many courses and congresses. He is co-author of several Italian textbooks on Prosthetic Rehabilitation and Clinical Dental Medicine. Dr. Lombardo is founder and scientific director of DentalTraining (Turin, Italy) where he conducts numerous practical-theoretical courses focused on Restorative Dentistry, Fixed Prosthodontics and Implant-Prosthodontics with particular attention to aesthetics and new digital technologies. He is also the author and curator of a dental YouTube channel with 110 videos followed by more than 50.000 colleagues from all over the world. Founding member of the new Italian Society of Dental Prosthesis and Oral Rehabilitation (SIPRO). He also serves as Opinion Leader in many dental companies.
